group-containing alkoxysilane (a-1) and an amino group-containing alkoxysilane having active hydrogen therein (a-2), (b) an acid catalyst, (c) an alkali-soluble UV absorber, (d) at least one organic solvent having a boiling point of 100 to 250°C, and (e) a dye and/or a pigment.

2. (Amended) A colored, transparent film-forming composition according to Claim 1, wherein said reaction product is one obtained by reaction between the epoxy group-containing alkoxysilane (a-1) and the amino group-containing alkoxysilane having active hydrogen (a-2) at a ratio by weight of 6:4 to 9:1.

3. (Amended) A colored, transparent film-forming composition according to Claim 1, wherein the amino group-containing alkoxysilane having active hydrogen (a-2) consists of N-(β-aminoethyl)-γ-aminopropyltrimethoxysilane.

Please cancel Claims 7 and 8.

Please add new Claims 9-12 as follows.

9. (New) The colored, transparent film-forming composition according to Claim 1, consisting essentially of (a) a reaction product of an epoxy group-containing alkoxysilane (a-1) and an amino group-containing alkoxysilane having active hydrogen therein (a-2), (b) an acid catalyst, (c) an alkali-soluble UV absorber, (d) at least one organic solvent having a boiling point of from 100 to 250°C, and (e) a dye and/or a pigment.

10. (New) The colored, transparent film-forming composition according to Claim 1, consisting of (a) a reaction product of an epoxy group-containing alkoxysilane (a-1) and an
